FR fittings are rated to a maximum helium leak rate of 4×10^{-11} std cm^3/s .

Ordering Information

- ⦿ Each component can be ordered separately.
 - ⦿ Add the material designator as a prefix, cleaning and packaging designator as a suffix to the basic ordering number to get the complete ordering number.
 - ⦿ Cleaning and Packaging
 - a. Standard Cleaning and Packaging Process (FC-01) for general industrial procedures. No suffix is needed.
 - b. Special Cleaning and Packaging Process (FC-02), to ensure compliance with product cleanliness requirement as stated in ASTM G93 Level C. Add "-F2" as a suffix when needed.
 - c. Ultra High Purity Process (FC-03) is applied to products with wetted surface roughness finished to an average of Ra 5 $\mu\text{in.}$ (0.13 μm). Add "-F3" as a suffix when needed.
- Example: For 1/2" 316L SS VAR gland with Ultra High Purity Process (FC-03), the complete ordering number is 6LV-G-FR8-TB8-6-F3.

Installation Instructions

1. Assemble the gland, nut, gasket and male nut as below. Finger tight the nut.

2. For fittings with 316L SS and nickel gaskets, tighten the nut 1/8 turn with a wrench while holding the male nut or the fitting body steady. Tighten the nut 1/4 turn for those with copper gaskets.

Cautions

- ⦿ Dimensions are for reference only and are subject to change
- ⦿ Over-tightening will damage the sealing beads and lead to possible leak
- ⦿ Utilize a new gasket for each assembly
- ⦿ Tungsten Inert Gas Welding (TIG) is recommended
- ⦿ Always apply sealing materials compatible with the fluid on tapered pipe threads
- ⦿ Do not loosen or tighten fittings when the system is pressurized
- ⦿ Integral FR fittings must remain stationary during installation. Integral male FR fittings should not be paired with integral female FR fittings. Instead, they should be used in conjunction with rotating nuts and glands.
